Sites where oversight of field work should continue are:
Newtown Creek (CSO sampling will need CDM for oversight of PRP collection)
Rolling Knolls (I believe field work is planned for October, and we have CDM available for oversight)

Subject: TIME CRITICAL - contingency planning

As mentioned in staff meeting this morning (sorry Ramon, you weren't there), we are doing the contingency planning in case there is a lapse in appropriations. Sites have been categorized as Tier 1, 2 and 3 in accordance with the draft guidelines provided by OSWER. For those few sites that are in RI/FS please identify where there are critical elements that need to proceed. Please note however that field work (sampling/split sampling) will cease in the event of a lapse but oversight of PRP sampling can continue (no splits as there won't be a lab!). We need this info by noon. Should be a short list.

Thanks
Angela
